

# ACCOLITE UNIVERSITY, JULY 2020

## React Assignment Submission

By: Ayush Malik

My React application implements 4 functionalities:

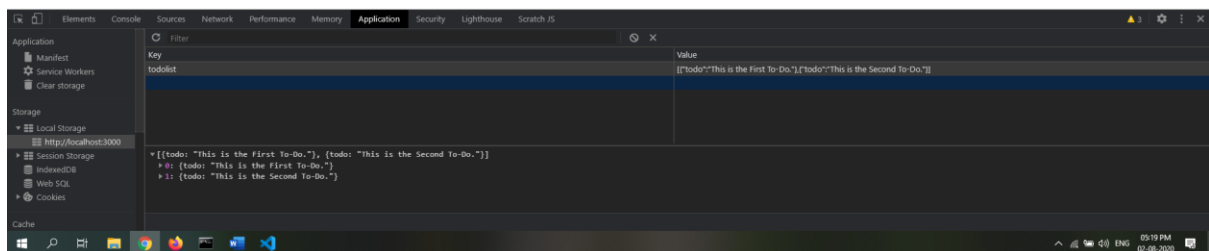

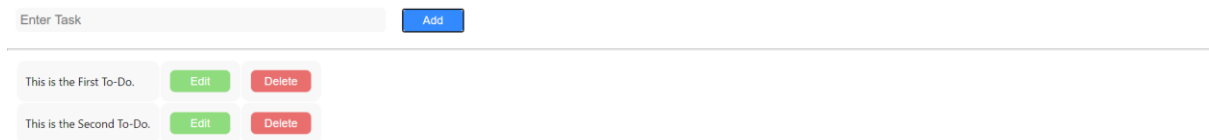

- Displaying the List of To-Do
- Adding a New To-Do
- Updating an Existing To-Do
- Deleting an Existing To-Do

I have used simple CSS for styling. I have tried to incorporate the concepts required. I have implemented the project using Functional Components and State Hooks and Class Components with State variables. I have also used Local Storage for storing and keeping track of To-Do. Execution outputs of the functionalities have been shown below:

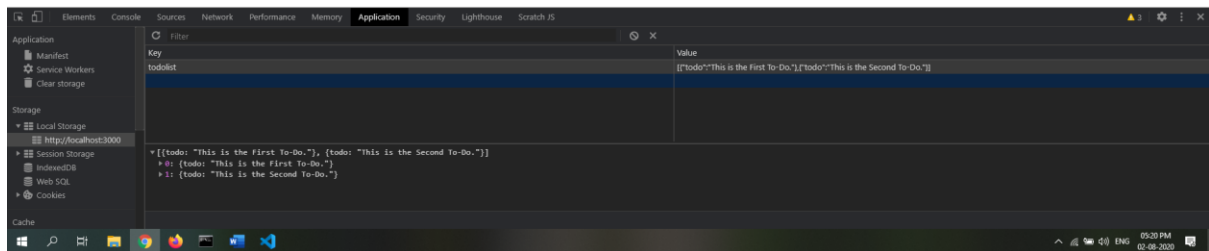

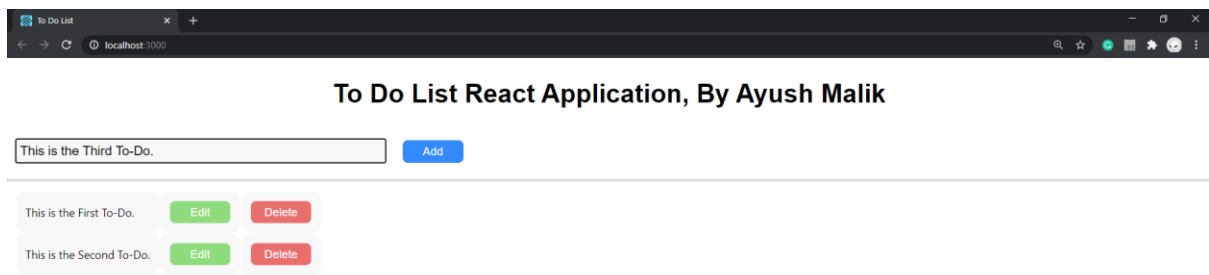

### Displaying the List of To-Do

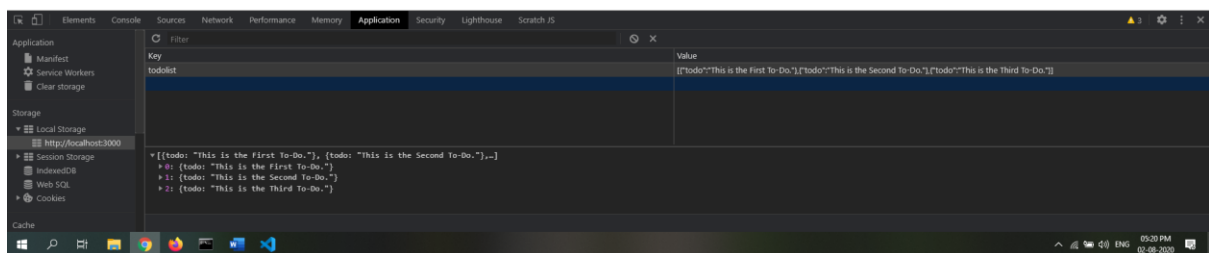

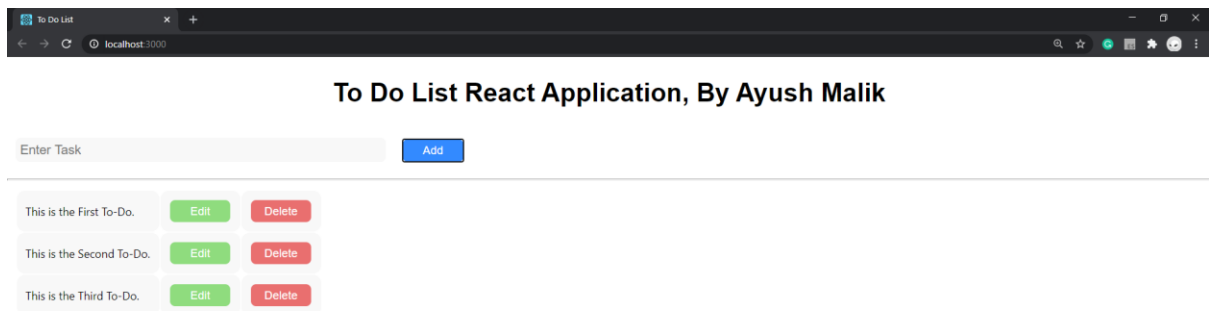

### To Do List React Application, By Ayush Malik

## Adding a New To-Do

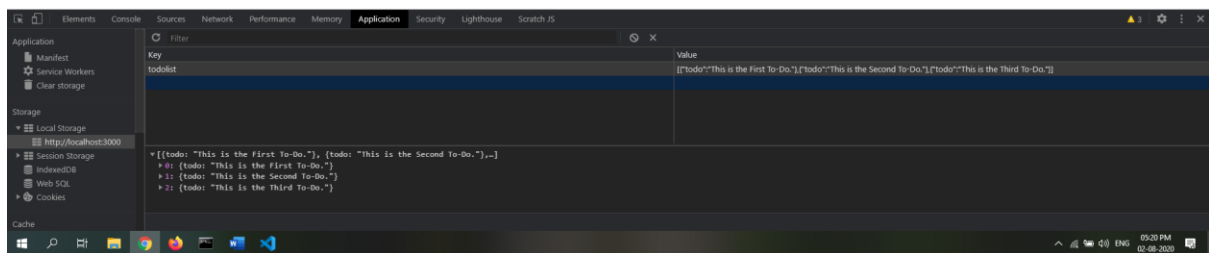

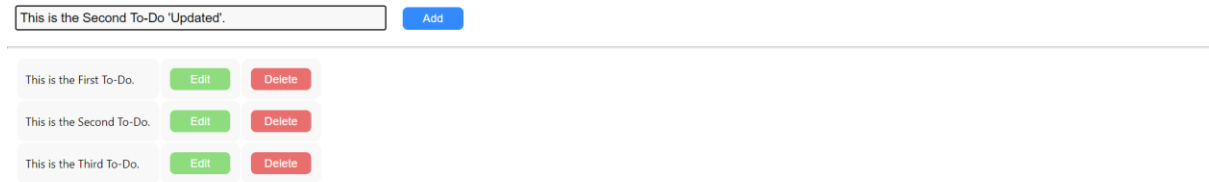

Added a Third To-Do using 'Add' Button.

# Updating an Existing To-Do

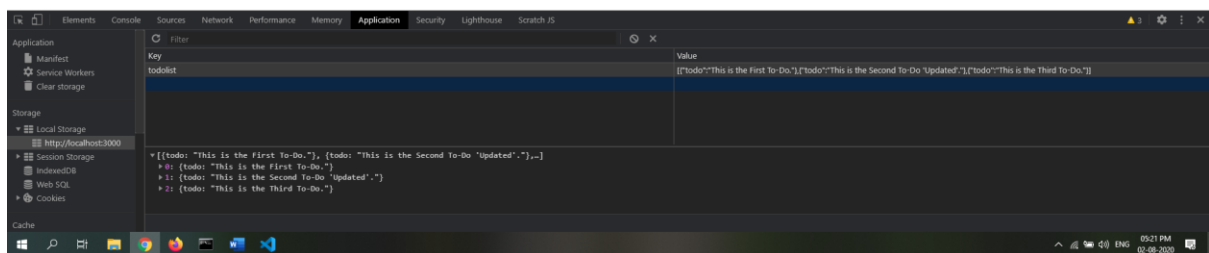

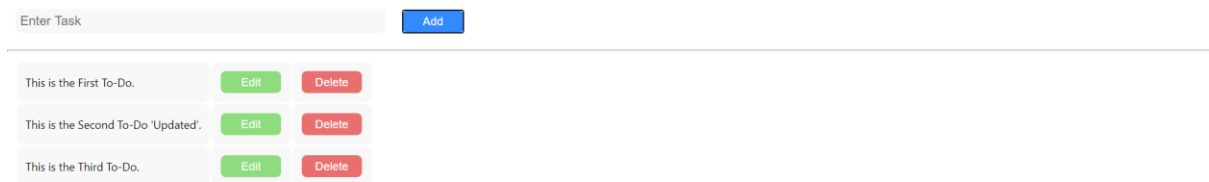

## To Do List React Application, By Ayush Malik

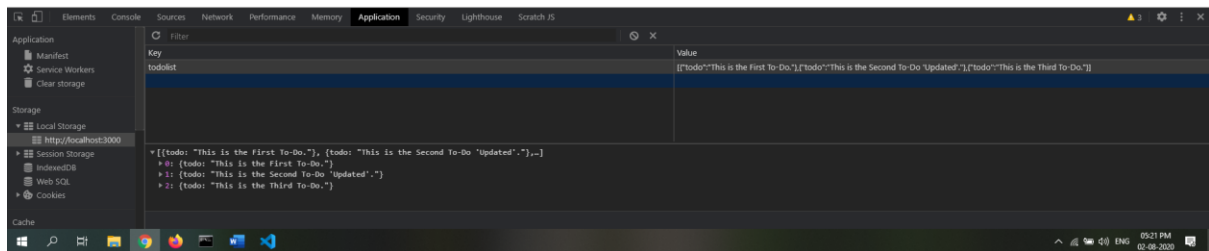

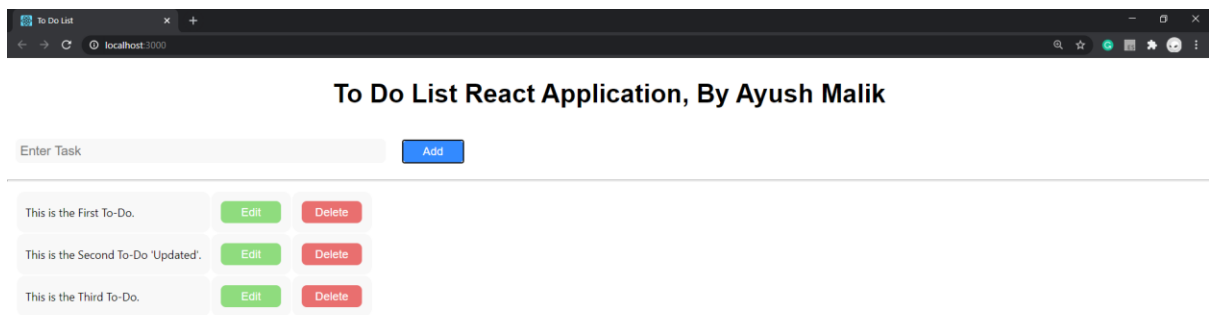

Second To-Do has been Updated using 'Edit' button.

## To Do List React Application, By Ayush Malik

## Deleting an Existing To-Do

After pressing 'Delete' Button on Second To-Do.
